

FEATURE PROJECT: Commercial Developer #1

THE CHALLENGE

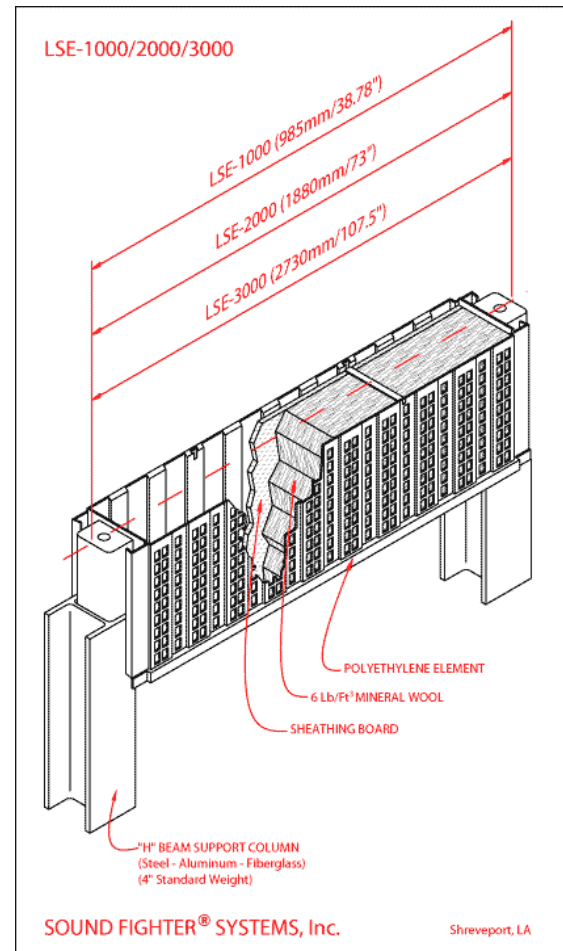

The developer of a retail shopping center in CA need an absorptive and aesthetically-pleasing sound wall to protect high-end residences located behind the center. The LSE System was selected due to its outstanding attenuation performance, and the ability to retrofit the system to compliment an existing stone fence.

THE SOLUTION

Sound Fighter Systems (SFS) designed a staggered LSE Absorptive Noise Barrier for the developer that effectively screened and reduced unwanted noise to acceptable levels at the residences. The innovative design included planting trellises, and was offset to keep the aesthetics of the existing stone wall.

SFS provided:

- Detailed engineered product drawings, layout drawings and installation drawings.
- Custom color-match LSE Noise Barrier sections and top caps
- Custom planting trellises
- Custom-engineered, hot-dipped galvanized structural steel framework, footers and base channels
