- Easy to assemble, move and disassemble
- Durable
- Weatherproof
- Maintenance free
- Available in any color
- Will not rot or rust
- Custom sizes available from 8' to 20' tall
- Non-conductive

Ideal for noisy sites.

These fully-mobile walls reduce unwanted noises that cause complaints by the general public and nearby residents, and can be configured to work on any application.

Why absorptive walls are better.

Absorptive walls, (like the LSE Mobile Wall System), actually absorb the sound waves that hit them, thus providing noise elimination. **Reflective walls**, (like concrete, block or metal), merely reflect the sound waves in a different direction, and can actually create new and unexpected noise problems as a result.

Mobility = flexibility and cost savings.

The LSE Mobile Sound Wall can be positioned to isolate any noise source and left there as long as necessary. Once the need at that location is over, the walls can be relocated to a different site. This mobility can provide years of cost-effective noise abatement service.

Custom-designed permanent LSE walls also available.
